

Text description of 'Digital screen: 5 reasons you should test for HIV. Oxfordshire branding'

5 reasons you should test for HIV

1. Anyone who is sexually active should take a test
2. Certain conditions can be a warning sign of HIV and your GP or healthcare professional may recommend testing.
3. HIV is easily treated
4. Once on effective HIV treatment you cannot pass HIV onto sexual partners
5. It's *better to know*. Regardless of the result, support and treatment are available for free on the NHS.

How can I get tested for HIV?

Testing for HIV is free and confidential in all our Oxfordshire Sexual Health clinics. You can even request an easy-to-use postal kit to test at home.

For more information on HIV testing and to order a test, please visit the Oxfordshire Sexual Health website by searching:
